Derivative Highlights.

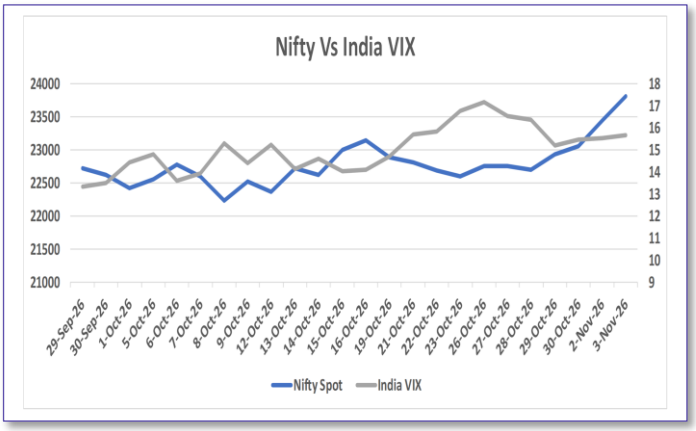

- On Tuesday, Nifty Futures continued the ongoing rally and closed on a positive note for the fourth consecutive session, gaining 1.59% and indicating strengthening bullish momentum. On the derivatives front, call writers continued to unwind their positions, contributing to the upward traction and supporting the ongoing rally. Alongside this, fresh buying interest emerged, indicating renewed participation from buyers and strengthening bullish conviction. Meanwhile, the Put-Call Ratio continued to remain in bullish territory, reinforcing the prevailing positive bias. However, implied volatility remained elevated, reflecting persistent uncertainty amid prevailing global cues. Overall, the derivatives setup remains constructive, with sustained buying participation and continued unwinding of bearish positions supporting the ongoing recovery.
- Meanwhile, Bank Nifty Futures also closed on a positive note, trading within a range of nearly 580 points during the session. However, on a positional basis, Bank Nifty Futures continue to exhibit a range-bound structure, with a decisive breakout awaited to establish the next directional move. On the derivatives front, short covering continued, indicating gradual unwinding of bearish positions and easing selling pressure. Meanwhile, implied volatility remained elevated, reflecting persistent uncertainty among market participants. Overall, the derivatives setup indicates improving buying traction, although a decisive breakout will be required to confirm sustained directional momentum.
- For the Weekly series, the 23900 strike has significant call open interest, followed by the 24000 strike. On the put side, 23700 has a substantial open interest, followed by the 23600 strike. Going ahead, the zone of 23650-23680 is likely to act as a crucial support area for the index. As long as Nifty sustains above the 23650 level, the ongoing bullish momentum is expected to continue, with the index likely to test the 23930-23950 zone in the short term.
- In Bank Nifty, the 56000 strike has significant call open interest, followed by the 56500 strike. On the put side, 55500 has a substantial open interest, followed by a 55000. Going ahead, the zone of 55900-56000 is likely to act as an immediate resistance area for the index. A decisive and sustained move above 56000 could trigger a fresh upside rally towards the 56600 level. On the downside, the 55100-55000 zone is expected to provide strong support and may cushion any near-term corrective decline.
