Derivative Highlights.

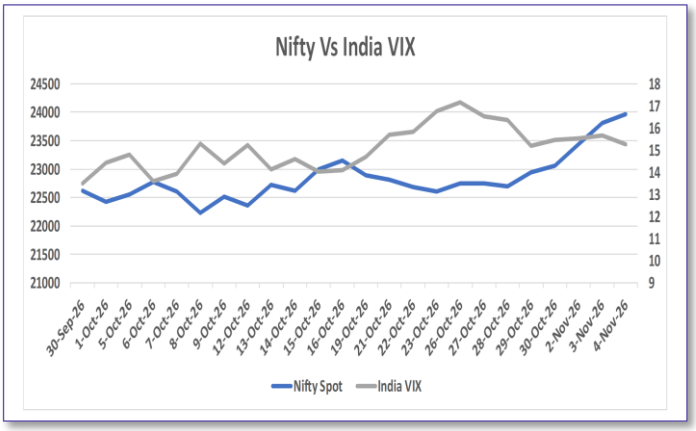

- Nifty Futures continued its upward trajectory, gaining 0.80% during the session and extending the ongoing recovery. The index futures marked its fifth consecutive session of short covering, indicating continued unwinding of bearish positions and a gradual easing of the prevailing selling pressure. Meanwhile, the Put-Call Ratio remained in bullish territory, reinforcing the prevailing positive bias and indicating sustained bullish positioning. However, a decline in implied volatility indicates easing uncertainty among market participants and improving market stability. Overall, the derivatives setup remains constructive, with continued short covering and bullish PCR positioning supporting the ongoing upward momentum.
- Meanwhile, Bank Nifty Futures closed 0.75% higher, marking the third consecutive session of positive closing and indicating sustained buying traction. On the derivatives front, fresh long build-up emerged, indicating renewed buying interest and strengthening participation from buyers. However, on a positional basis, Bank Nifty Futures continue to trade within a range-bound structure, with a decisive breakout on either side required to establish the next directional move. Meanwhile, the Put-Call Ratio continued to remain near 1, indicating neutral positioning from both buyers and sellers. Overall, the derivatives setup reflects improving buying traction, although a decisive breakout will be required to confirm sustained directional momentum.
- For the Weekly series, the 24000 strike has significant call open interest, followed by the 24100 strike. On the put side, 23900 has a substantial open interest, followed by the 23800 strike. Considering the gap up opening, the 24370-24400 zone is likely to act as an immediate resistance zone for the index. Any follow through buying above 24400 can lead to Index extending its up move towards 24550 in the near term. On the downside, the zone of 24230-24200 zone is expected to act as an immediate support.
- In Bank Nifty, the 56000 strike has significant call open interest, followed by the 56500 strike. On the put side, 55500 has a substantial open interest, followed by a 55000. Considering the gap up opening, the 56800-56900 zone is likely to act as an immediate resistance zone for the index. Any follow through buying above 56900 can lead to Index extending its up move towards 57300 in the near term. On the downside, the zone of 56400-56300 zone is expected to act as an immediate support.
